

A woman with short blonde hair and glasses, wearing a white lab coat, is performing a procedure on a male patient lying on a table. She is using a specialized medical device with a camera-like lens to examine the patient's eye. The patient is wearing a blue hospital gown and a head-mounted device. A large, adjustable medical light fixture is positioned above the patient. The background is a plain, light-colored wall.

Sara A. Kaltreider, M.D.

# Eyelid & Facial Aesthetics

Oculoplastics & Orbital Consultants, PLC

630 Peter Jefferson Pkwy, Suite 140, Charlottesville

**Dr. Sara Kaltreider** is an Oculoplastic surgeon who has restored and rejuvenated eyelids in Virginia for over 30 years. After many years of academic practice with both MCV-VCU and UVA, she founded a solo practice *Oculoplastics & Orbital Consultants, PLC*. Inspired by the latest technological advances for non-invasive rejuvenation, she now practices under the name of *Eyelid & Facial Aesthetics*, offering surgical eyelid procedures and laser treatments for enhancing eyelids, skin, and body contour.

“My background, technical skills in microsurgery, expertise in local anesthesia in the eyelid and facial area, and in-depth knowledge of facial anatomy allow me to deliver safe, effective and comfortable procedures. More than thirty years of patient care and experience with both surgical and minimally invasive procedures have given me insight into various combinations of modalities to provide optimal results. I am uniquely qualified to present options for care that are particularly suited to each individual.”

Enjoy feeling and looking your very best. Whether you have a specific need, or would like a comprehensive consultation, you will enjoy a comfortable private office, a relaxing environment and the counseling of an expert oculoplastic surgeon. If you have problems with droopy or puffy eyelids, and sagging eyebrows, then surgery may be your best option. If your concern is dull or sun-damaged skin, and wrinkles, then non-invasive options such as OPL and CO2 laser might be your best options. Loss of definition of the eyelids, eyebrows or lips is resolved by micropigmentation which restores your youthful definition. Loss of mid-face volume, flattening and thinning of the lips with peri-oral wrinkles associated with aging of the face are treated and can be addressed with the advanced filler products for a beautiful look. We look forward to your visit and would like to help you achieve your optimal aesthetic goals!

*...Helping patients look their very best at any age*

**Sara A. Kaltreider, M.D.** and clinical technicians Lois and Cindy provide expert assistance in the clinic and procedure rooms. They offer support to patients before, during, and after procedures and are specialists when it comes to patient comfort.
